Tutorial 4;

- Create a sketch layer in the plane as shown

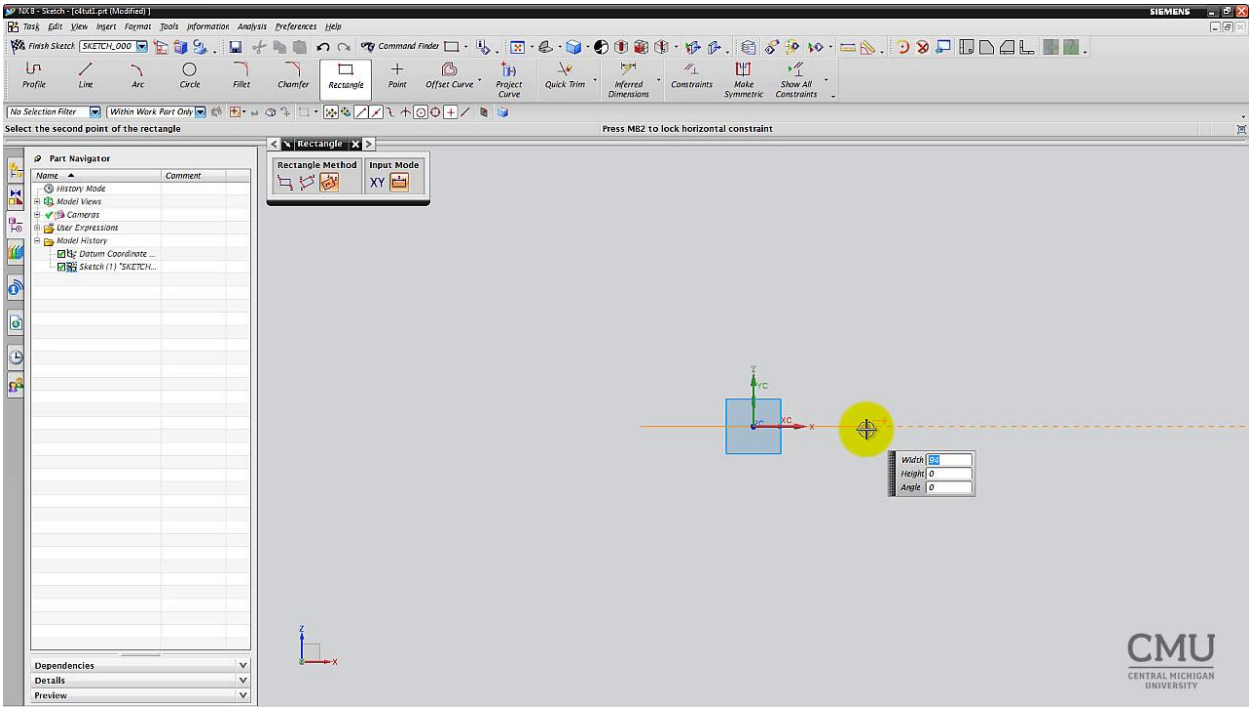

- Launch the rectangle command for this particular sketch

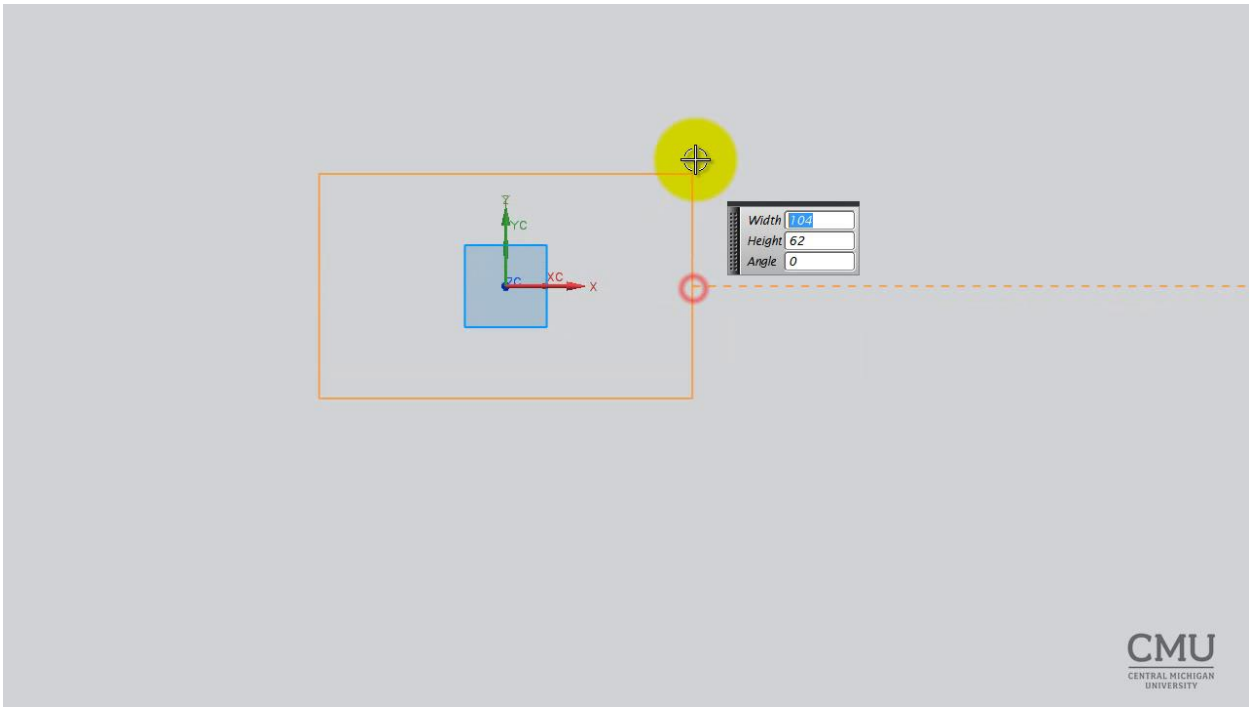

- Select the ‘from center option’ as shown in the diagram below

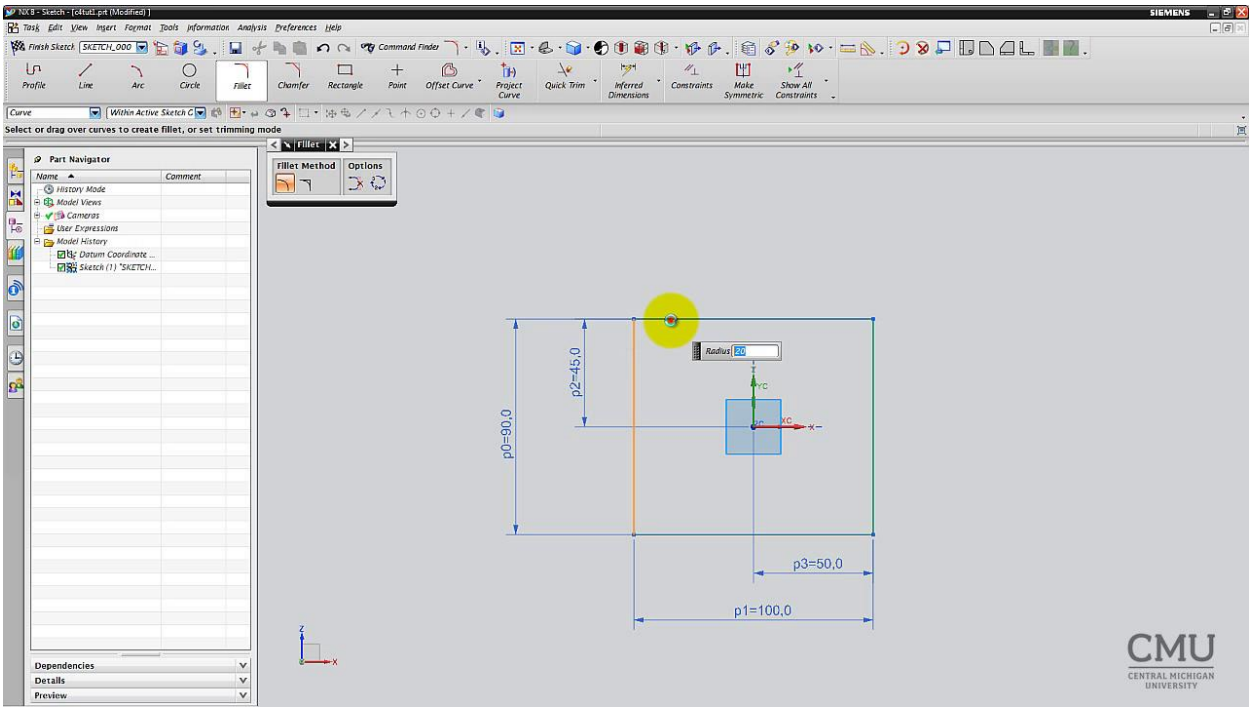

- Using the origin of the default coordinate system as the center of the rectangle, move the cursor left or right and then specify the width of the rectangle.

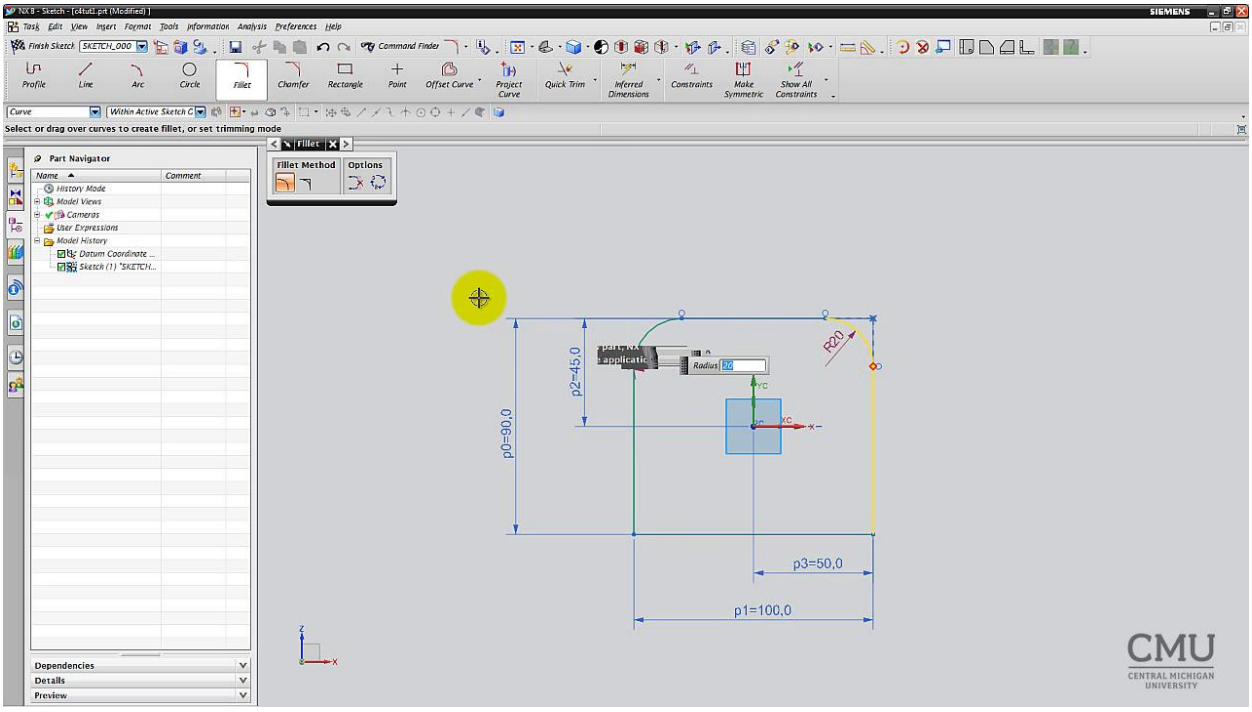

- Move the cursor up or down to specify the height of the rectangle

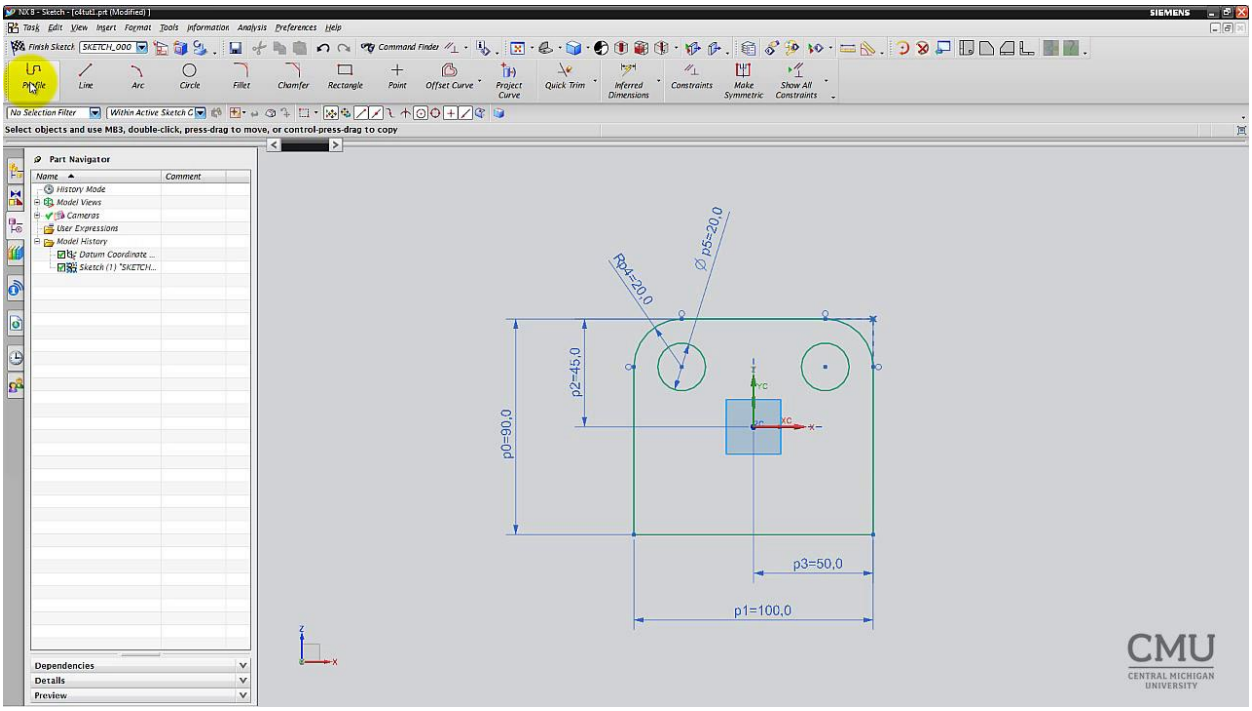

- Ensure the sketch is as dimensioned as in the diagram below

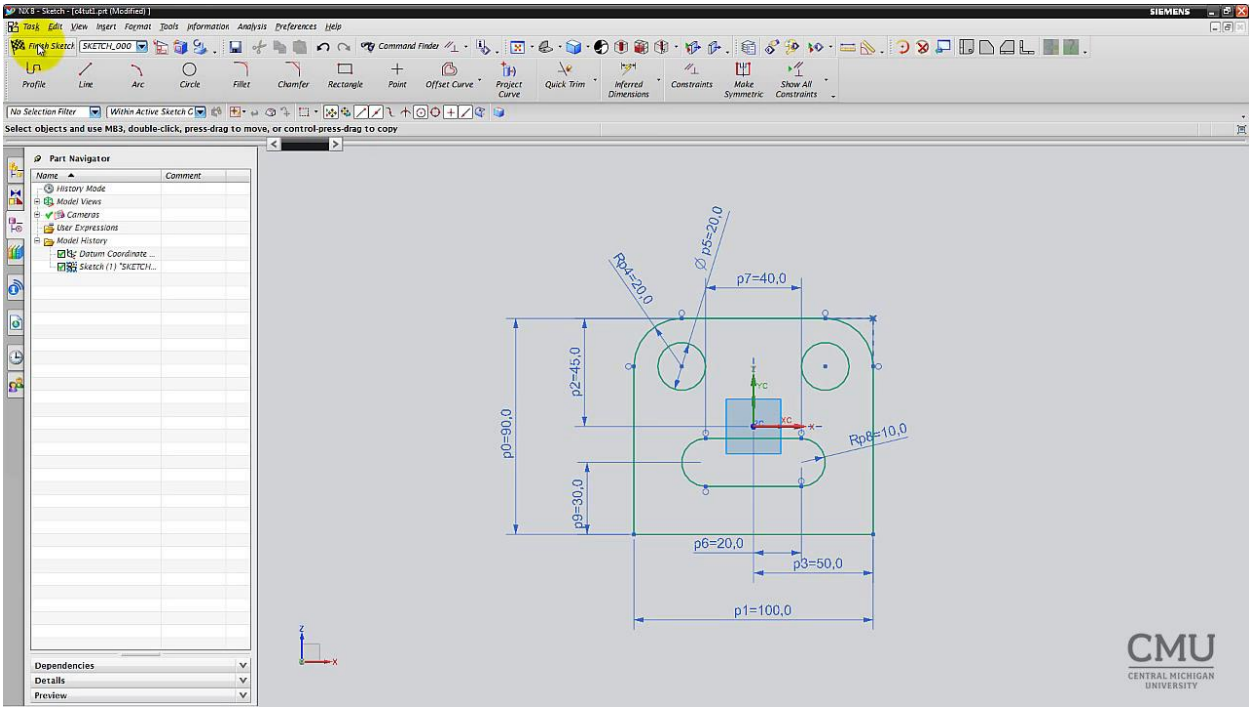

- Create a fillet at the top two vertices with radii of 20mm

- Insert two circles at the center of each fillet arc with diameter 20mm

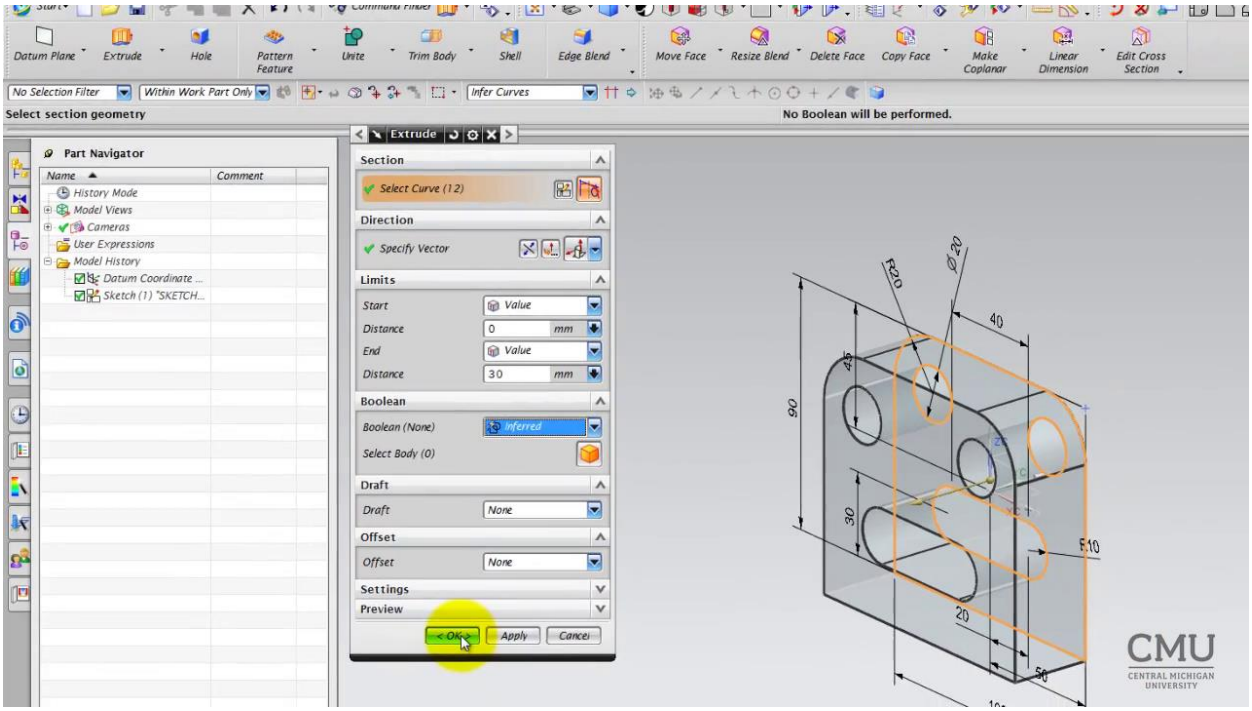

- Complete the sketch and use the dimensions as shown below

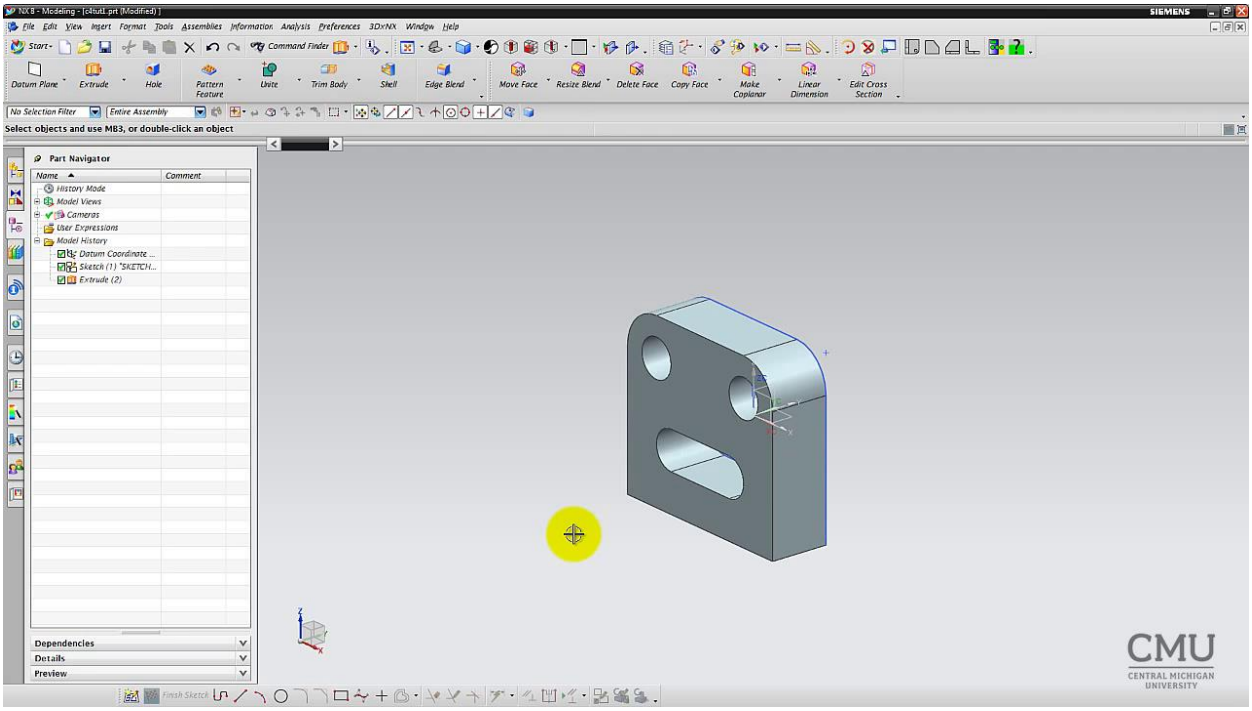

- Finish the sketch.

- Extrude the sketch with the parameters as shown in the diagram below.

- The model is generated as below

- Save the model as “tut04.prt”

ASSIGNMENT 4
