Tutorial 6;

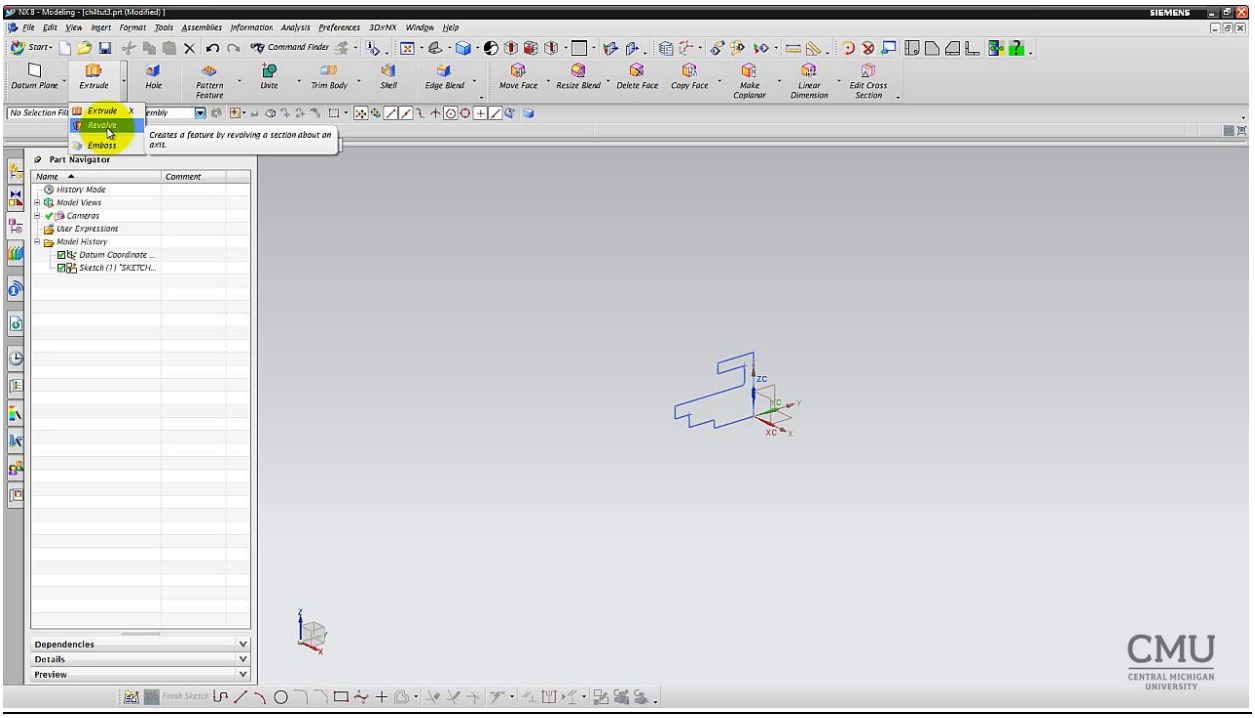

- Reproduce the sketch in the required plane as shown in the diagram below.

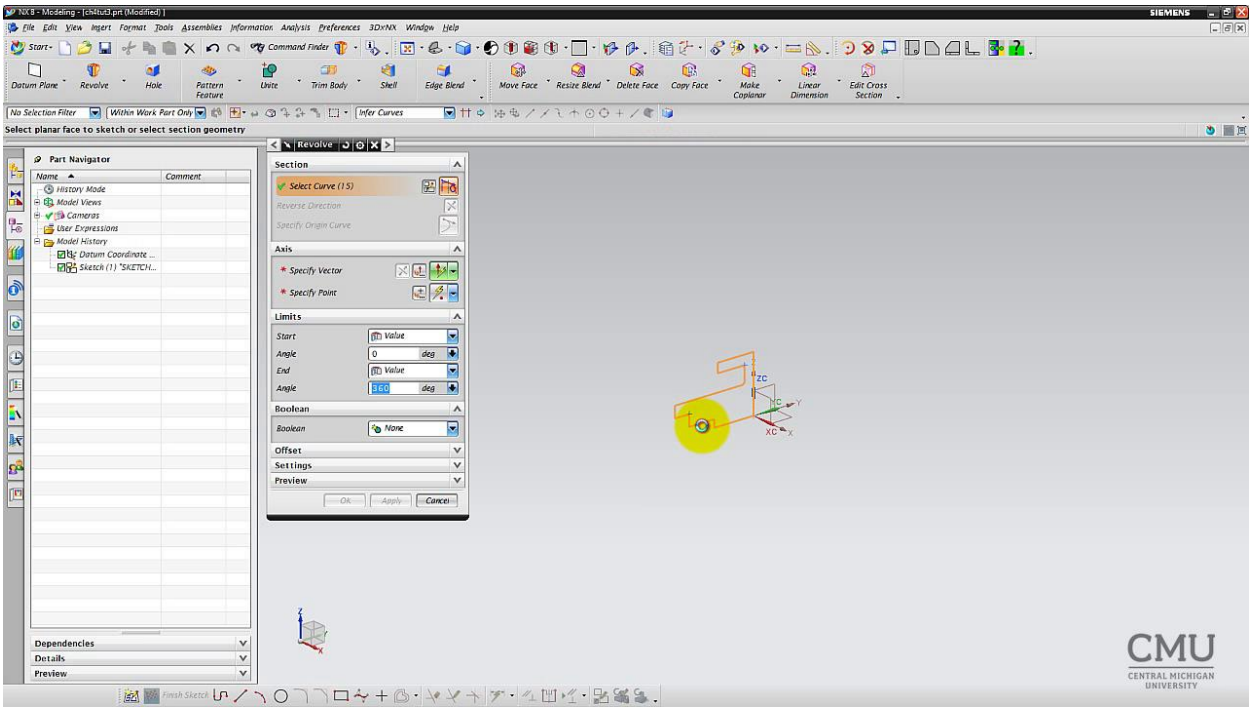

- Create fillets with radii 1.5mm as shown below.

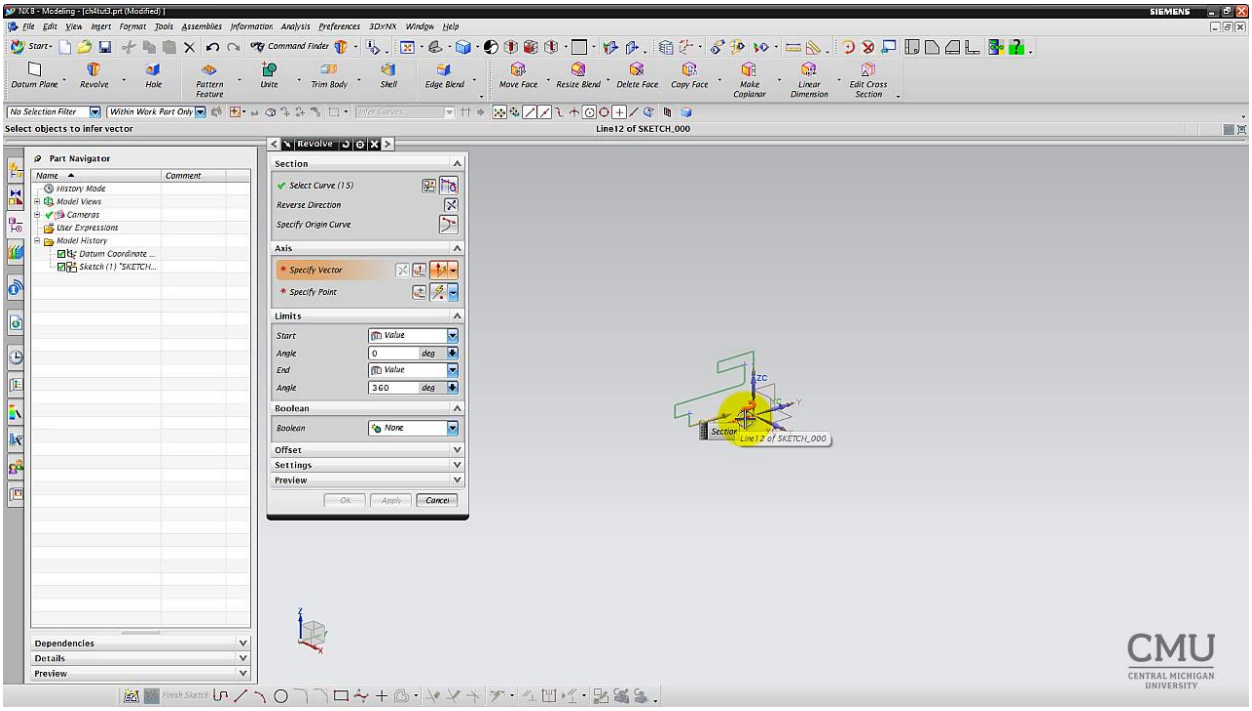

- Invoke the revolve command as shown in the diagram below.

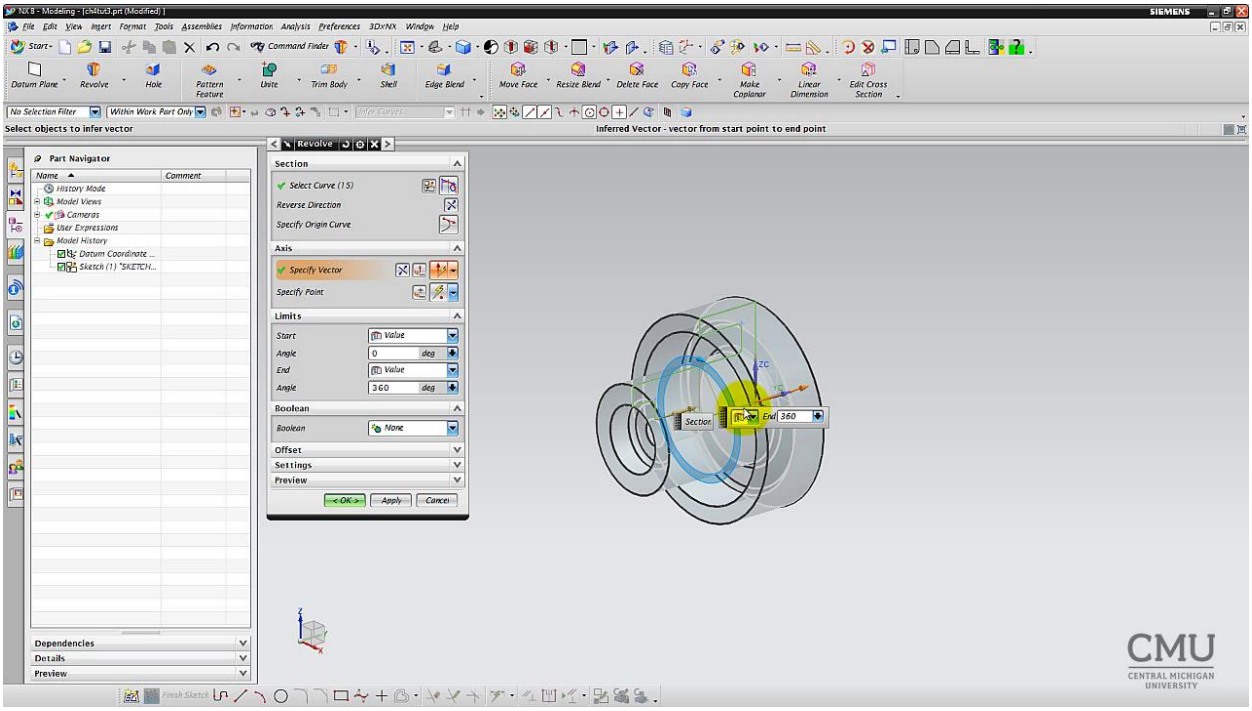

- As the Revolve dialogue box appears, under the select curves option, select the sketch produced in the previous step.

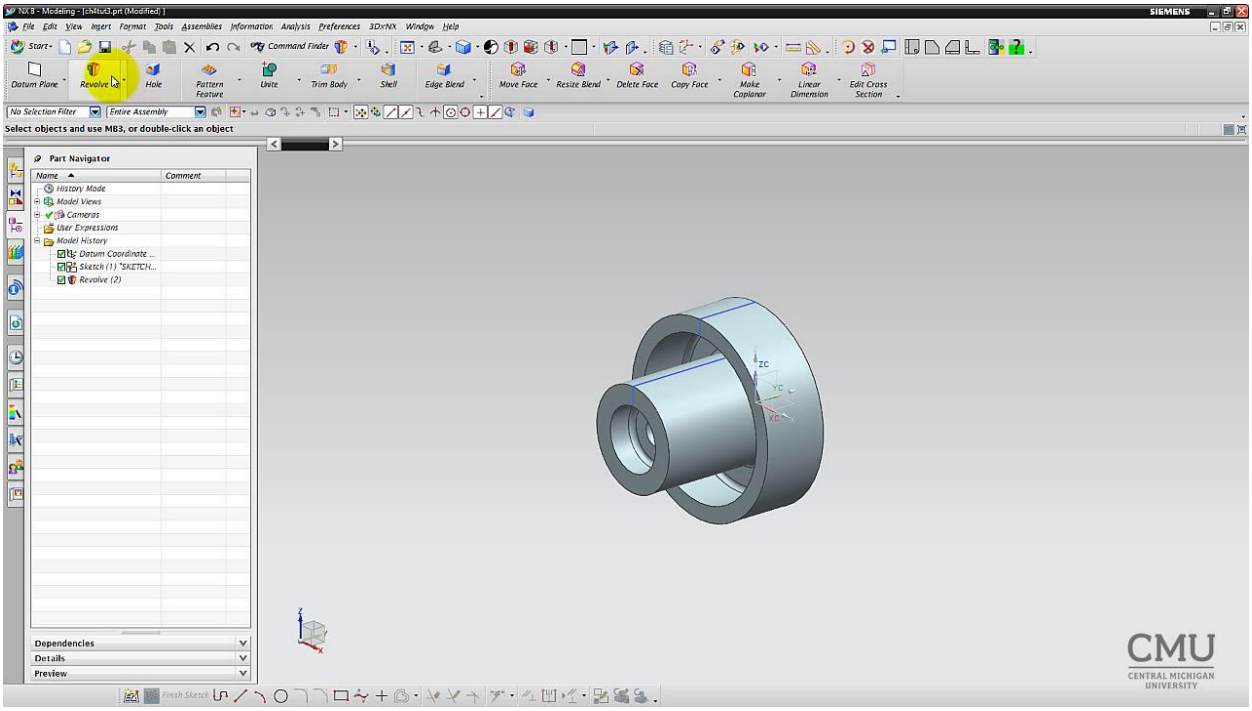

- Under the specify vector option, select a line or axis of rotation as shown in the diagram below.

- Ensure the rest of the options are as specified in the diagram below.

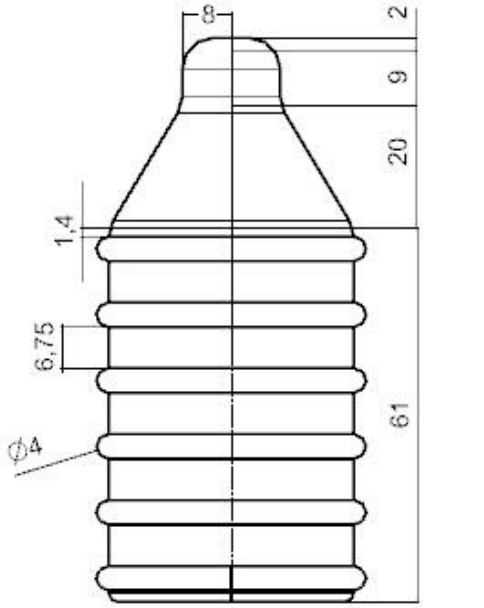

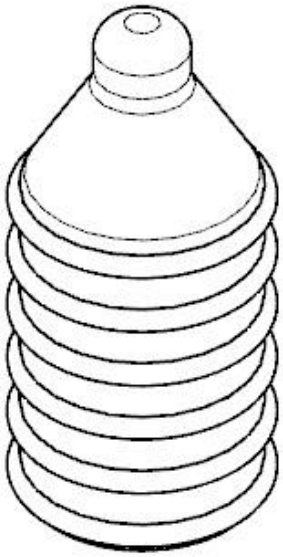

- The final model should be as shown below.

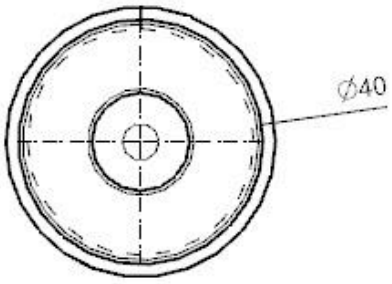

- Save the file as “tut06.prt”
