Tutorial 9;

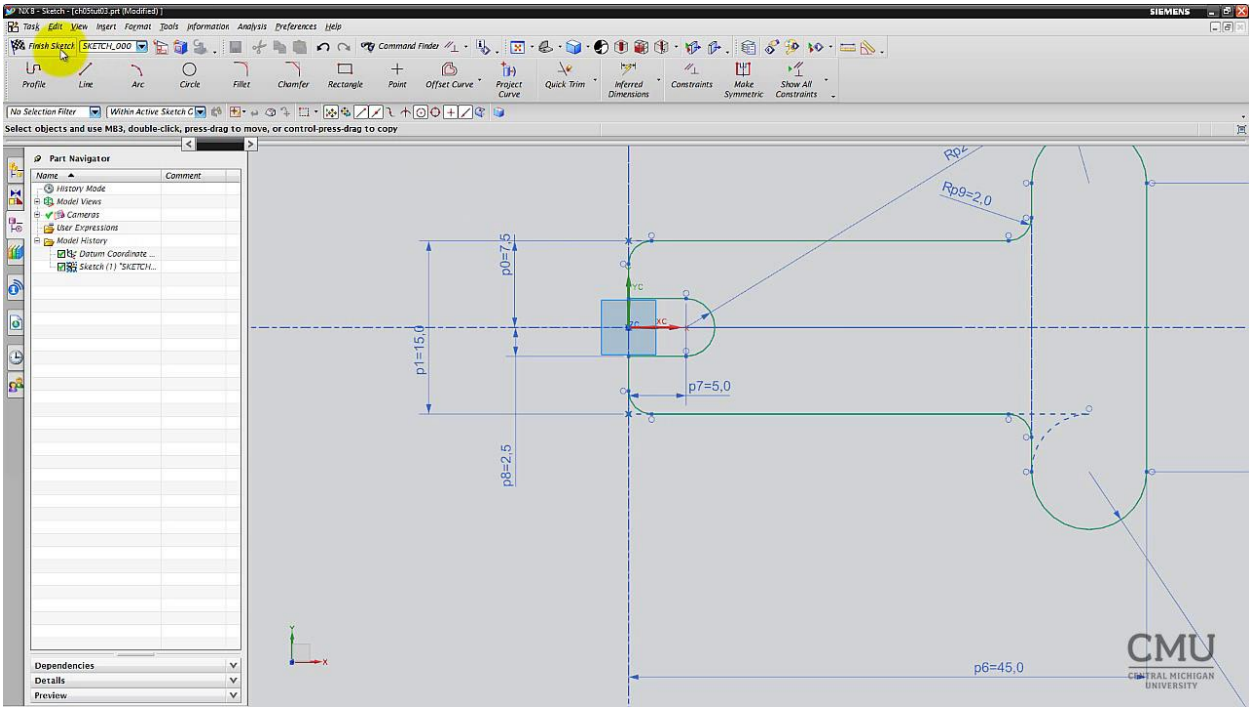

- Create a sketch layer in the plane shown in the diagram below

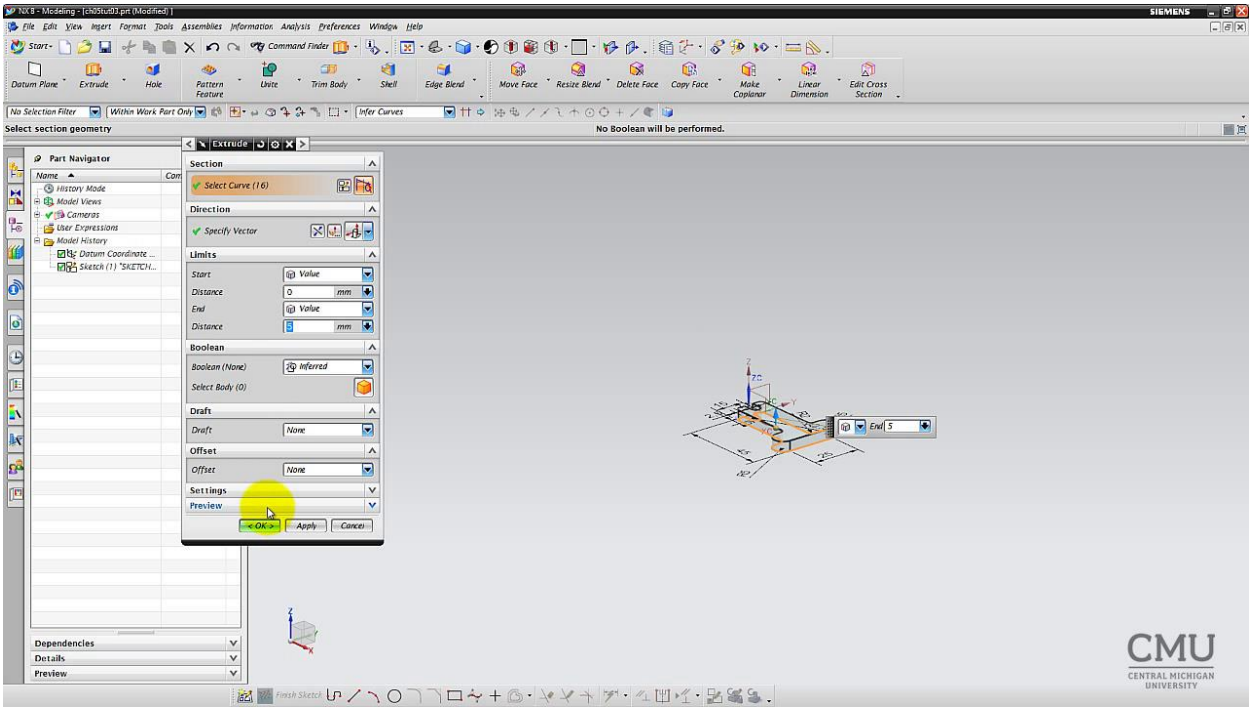

- Reproduce the sketch below on the specified plane

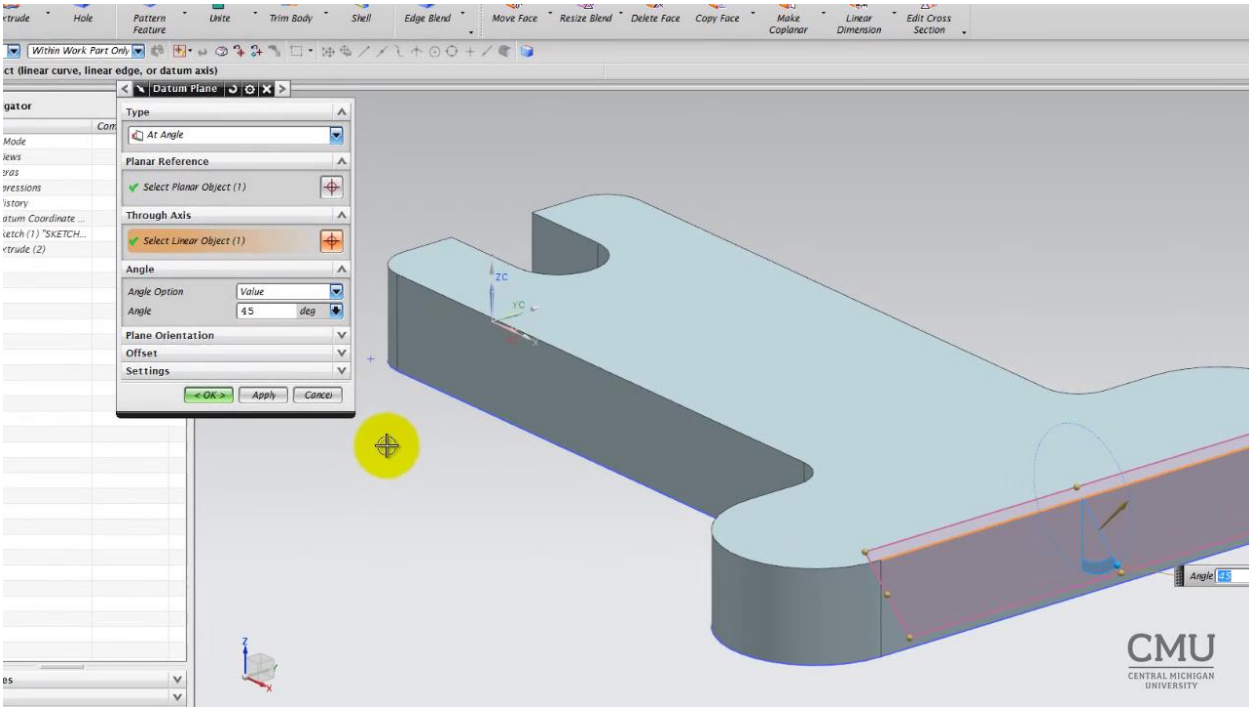

- Ensure the dimensions match those in the diagrams above and below

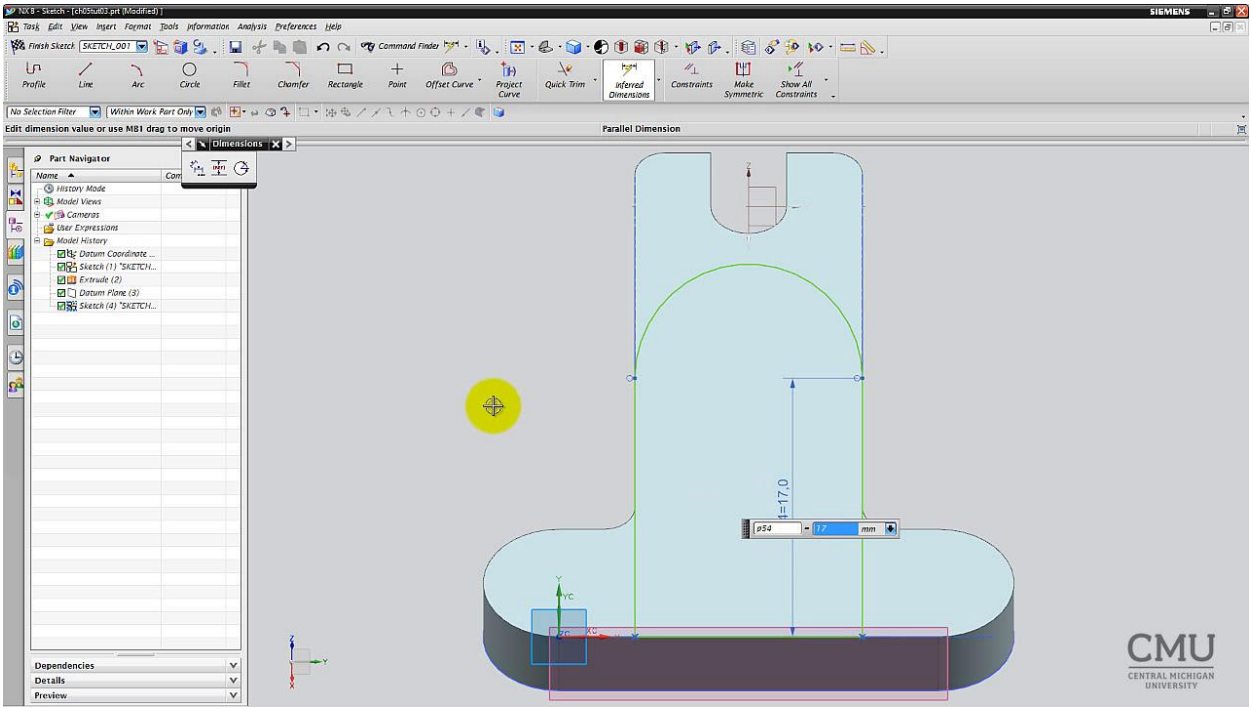

- Extrude the sketch using the parameters in the diagram below

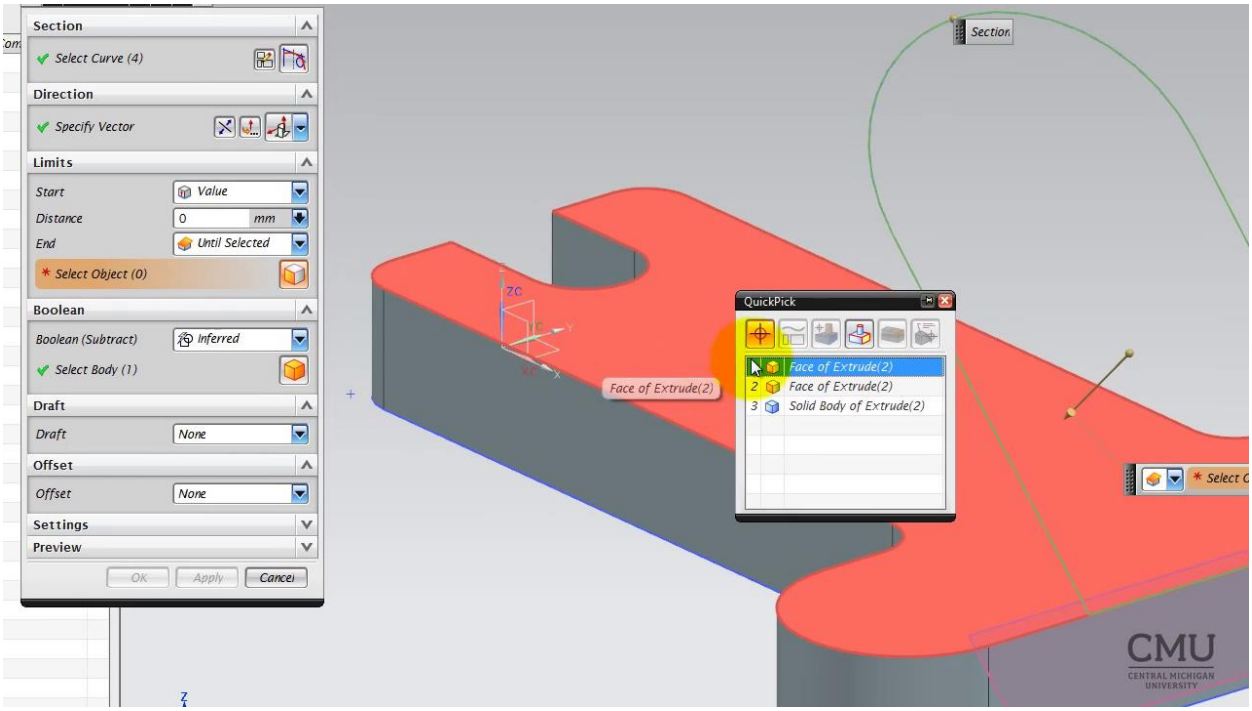

- Create a datum plane at an angle as shown

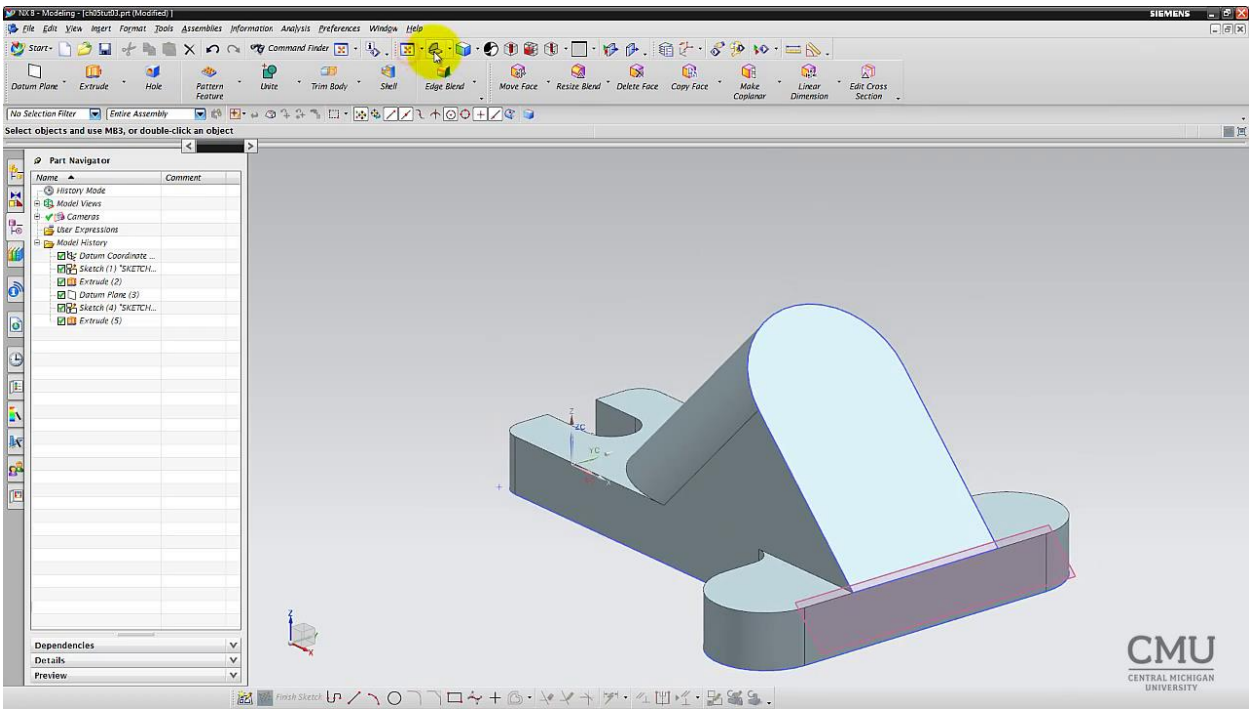

- Create a sketch on the newly created plane as below

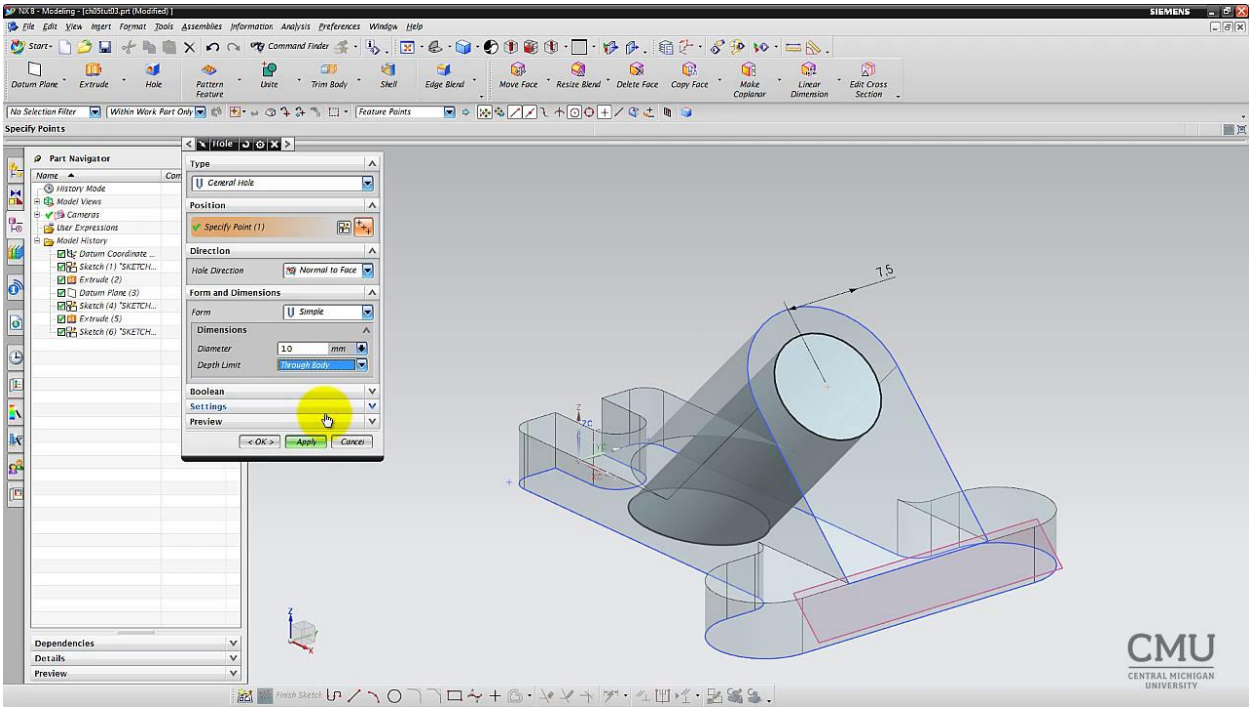

- Extrude the sketch normal to the newly created plane to meet the top face of the base block

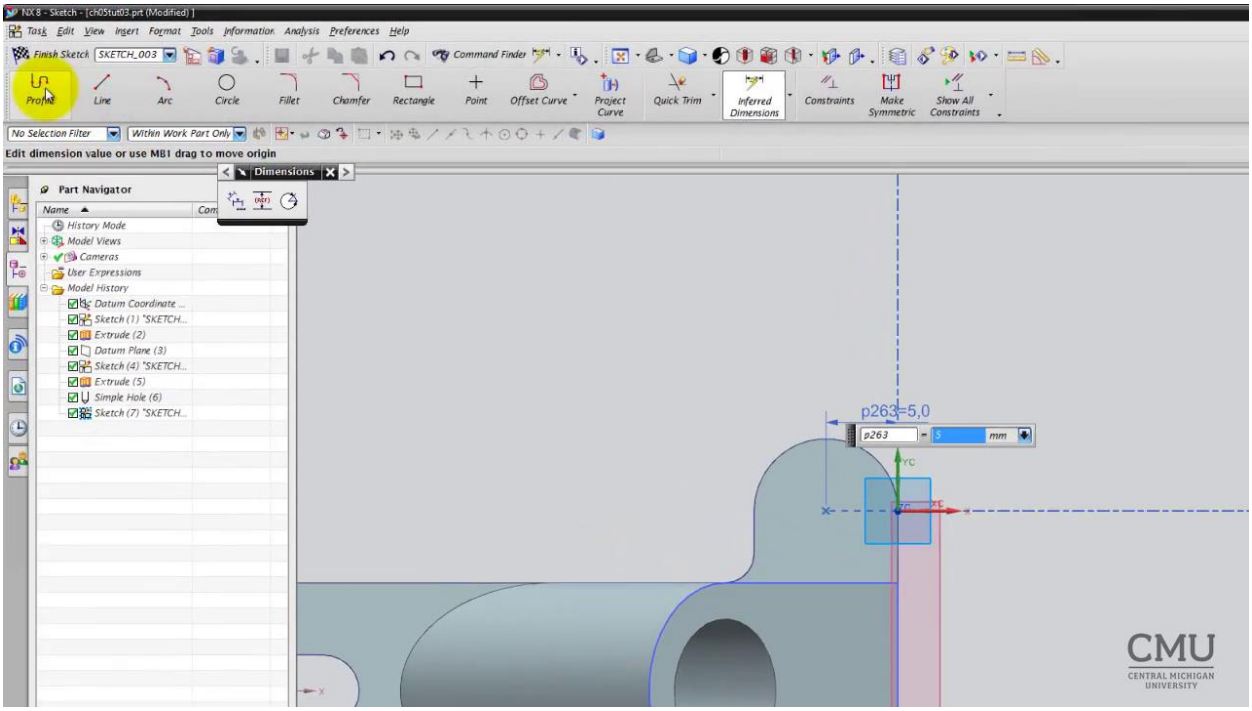

- The resulting model should be as shown below

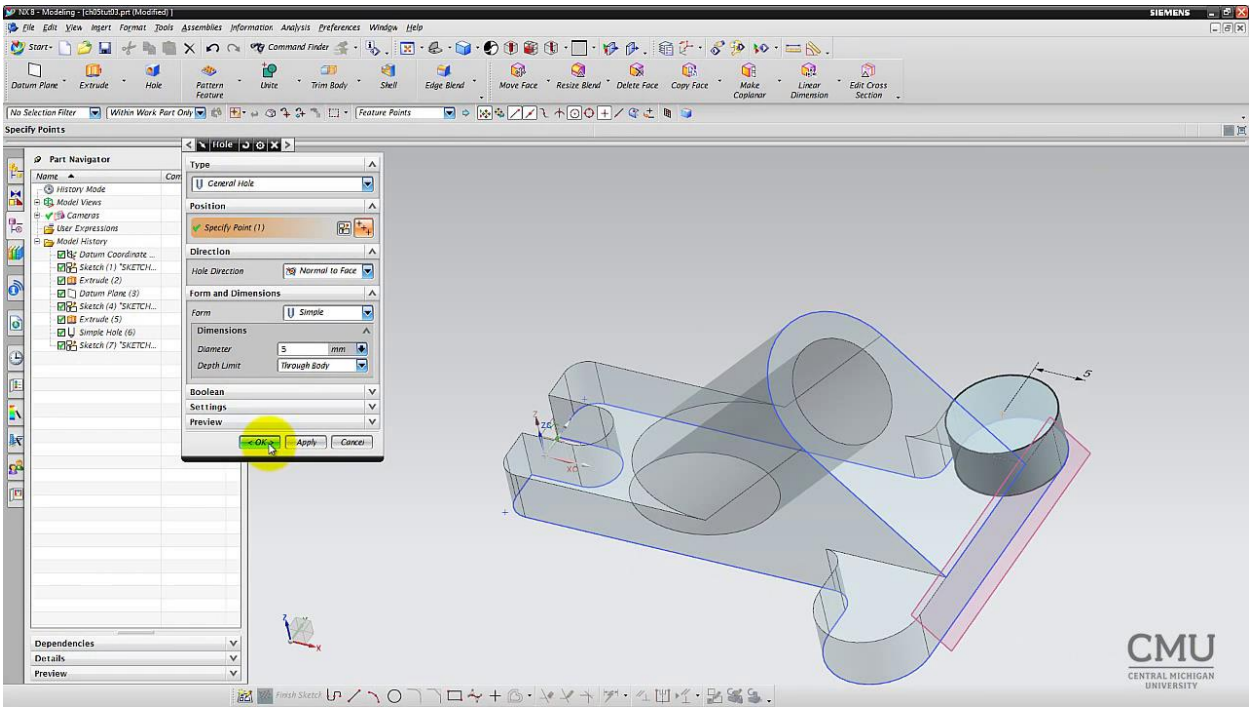

- Create a hole at the position shown below

- Create two more holes with the same dimensions at opposite ends using the parameters shown in the diagrams below

- The resulting final model should be as presented below
