Leading

Third Function of Management

Leading Function

Leading involves:

- ⊡ Motivating employees to attain goals,
- ⊡ Managing group processes (coordinating and directing),
- ⊡ Dealing with conflicts and change.

Leadership: is the ability to influence people to willingly follow one's guidance or adhere to one's decisions.

A leader executes the leading function.

Qualities of a Leader - 1

Self confidence: The belief in one's own power to succeed in solving problems and the belief in one's own ability to deal with difficult situations.

Initiative: The ability to lead action without waiting to be prompted and to bring fresh thought to old problems.

Adaptability: The ability to change one's outlook as circumstances change and to alter one's action in the light of what is necessary in changed circumstances.

Integrity: This includes trustworthiness and loyalty to one's organisation and one's staff.

Qualities of a leader -2

Decisiveness: The ability to think positively and without vacillation (keep changing one's mind) and to act in the same way.

Stamina: The ability to work long and hard without undue strain or stress.

Ability to delegate: involves assigning a portion of his task to subordinates.

Drive: The urge and enthusiasm to stimulate action, both personal and in other people.

Human understanding: the ability to work with other people with understanding and sympathy; the willingness to listen to staff problems.

Leadership Styles

Leadership styles : The way in which the ***functions of leadership*** are carried out, the way in which ***the manager typically behaves*** towards members of the group.

1. Autocratic Styles
2. Laissez-Faire (Free Reign) Style
3. Democratic (Participative Style)

NB: One is able to distinguish among the various styles by looking at how **the leader goes about the function** and **how the group or the subordinates behave**.

AUTOCRATIC STYLE - 1

"Do as I say and not as I do"

It is also known as the Authoritarian or Dictatorial Style

- The focus of power is with the manger

Leader takes responsibility for:

- decision-making, control of rewards and punishment and authority for determining policy procedures for achieving goals

AUTOCRATIC STYLE - 2

Leader

1. The individual is very conscious of his or her position.
2. Leader has little trust and faith in members of the group.
3. Leader believes pay is a just reward for working and the only reward that will motivate employees.
4. Orders are issued to be carried out, with no questions allowed and no explanations given.

Group Members:

✓ No responsibility is assumed for performance; people merely do what they are told.

✓ Production is good when the leader is present, but poor in the leaders absence.

LAISSEZ-FAIRE (FEE REIGN) STYLE- 1

Genuine laissez-faire style: manager observes that members of the group are working well on their own, and, therefore decides to pass the focus of power to members to allow them freedom of action and not to interfere, but is readily available if help is needed.

Laissez-Faire - 2

"Genuine" is being emphasised here because this is to be contrasted with the manager ***who could not care***, ***who deliberately keeps away*** from the trouble spots and does not want to get involved. The manager just lets members of the group get on with the work in hand.

Members are left to face decisions which rightly belong with the manager.

This is ***more a non-style of leadership***.

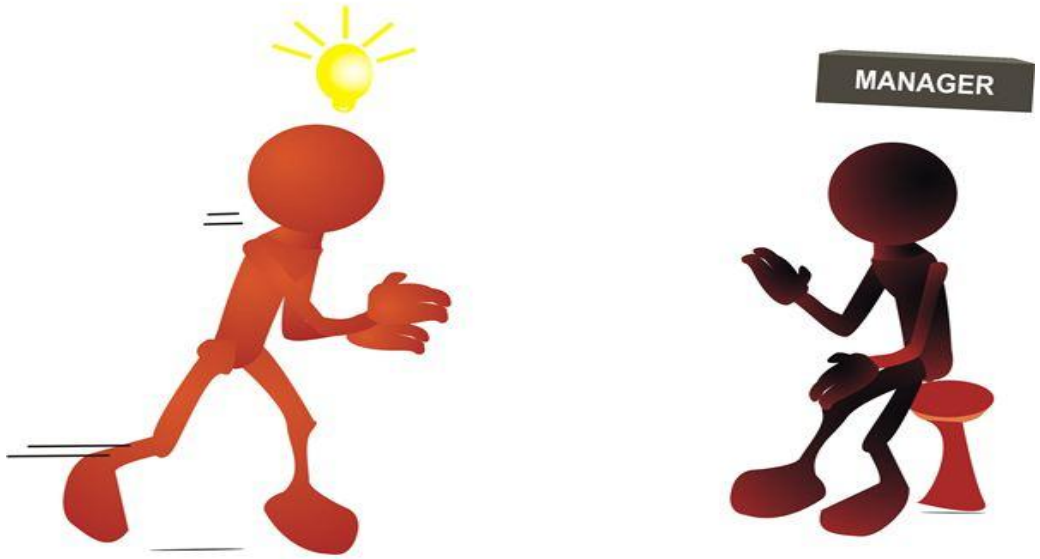

Leader

1. He or she has no confidence in his or her leadership ability.
2. This leader does not set goals for the group.

Group

1. Decisions are made by whoever in the group is willing to do it.
2. Productivity generally is low, and work is sloppy.
3. Individuals have little interest in their work.
4. Morale and teamwork generally are low.

Democratic Style - 1

DEMOCRATIC STYLE -2

✓ ***Focus of power*** is more ***with*** the ***group*** as a whole ;

✓ There is ***greater interaction*** within the group;

✓ The ***leadership function*** is shared ***with*** members of the ***group;***

✓ The manager is more part of a team;

✓ The ***group members*** have a greater say in the ***decision-making***, determination of policy, implementation of systems and procedures.

DEMOCRATIC STYLE - 3

Leader:

1. ***Decision-making is shared*** between the leader and the group;
2. When the leader is required or forced to make a decision, his or her reasoning is explained to the group.

Group members:

1. New ideas and change are welcome;
2. A feeling of responsibility is developed within the group;
3. Quality of work and productivity generally high;
4. The group generally is successful.

EXERCISE!!!

Understanding your approach to leadership

MOTIVATION

✓ Most people begin a new job with energy and enthusiasm but employees can lose their drive if mangers fail in their role as motivators.

✓Lack of motivation can lead to decline in performance.

Motivation refers to the forces either within or external to a person that arouses enthusiasm and persistence to pursue a certain course of action.

✓ Studying motivation helps managers understand what prompts people to initiate action, what influences their choice of action and why they persist in that action over time.

MOTIVATION

A simple model of motivation

APPROACHES TO MOTIVATION

A managers assumption about employee motivation and the use of rewards depends on their perspective on motivation.

Four Distinct Perspectives:

1. **Traditional Approach**: People will work harder for pay (Frederick W. Taylor).
2. **Human Relations Approach:** Non-economic rewards e.g. congenial work groups (Hawthorne Studies at Western Electric).
3. **Human Resource Approach :** Employees are complex and are motivated by many factors .
4. **Contemporary Approach:** Dominated by three main theories:

    1. Content theories
    2. ERG theory
    3. Two -factor theory

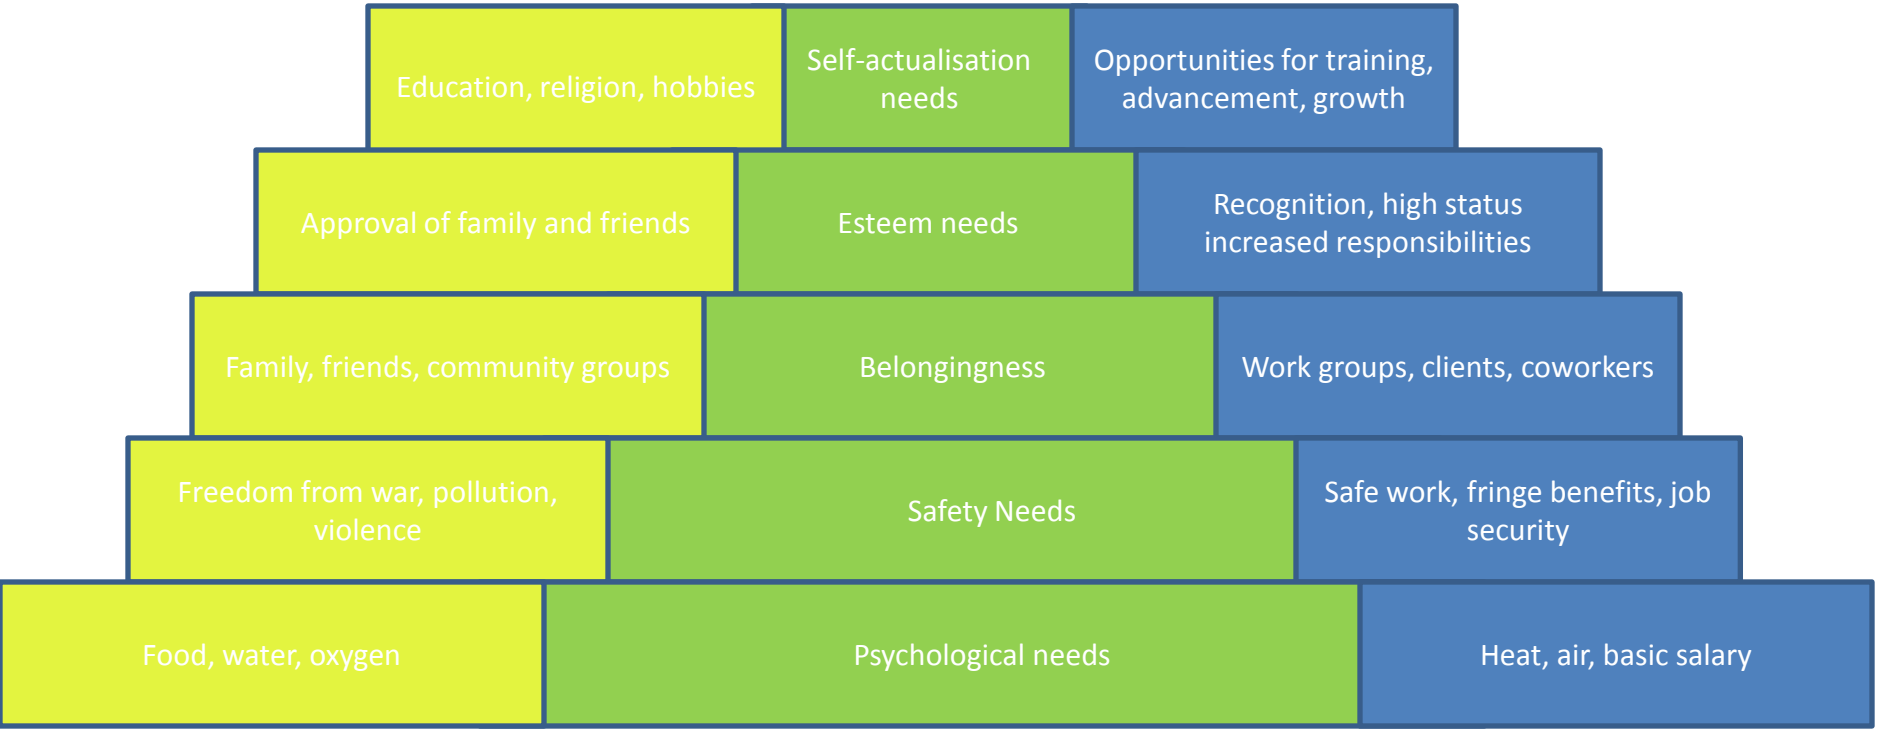

CONTENT THEORIES -1

Content theories emphasise the needs that motivate people.

1. Basic need;
2. Basic needs translate into an internal drive that motivates specific behaviours in an attempt to fulfill the needs.

Therefore if mangers understand the needs of employees they can design reward system to meet them and direct employees' energies and priorities towards attaining organizational goals.

CONTENT THEORIES - 2

Maslow's Hierarchy of Needs

ABRAHAM MASLOW'S HIERARCHY OF NEEDS

Psychological needs: Most basic human physical needs –include food, water and oxygen. In the organisational setting, they are reflected in the needs for adequate heat, air and basic salary to ensure survival.

Safety needs: includes a safe and secure physical and emotional environment and freedom from threats. In an organisational workplace, safety needs reflect the needs for safe jobs, fringe benefits and job security.

Belongingness needs: These needs reflect the desire to be accepted by one's peers, have friendships, be part of a group and be loved. In the organisation, these needs influence the desire for good relationships with coworkers, participation in a work group and a positive relationship with supervisors.

Esteem needs: These needs relate to the desire for a positive self-image and to receive attention, recognition and appreciation from others. In organisational setting , esteem needs reflect a motivation of recognition, an increase in responsibility and credit for contribution to the organisation.

Self-actualisation needs: Needs include self-fulfillment, which is the highest need category. They include developing one's full potential, increasing one's competence and becoming a better person. The needs can be met in organisations by providing people with opportunities to grow, be creative and acquire training for challenging assignments and advancements.

ERG THEORY

Clayton Alderfer proposed a modification of Maslow's theory in an effort to simplify it and respond to criticisms of its lack of empirical verification.

ERG theory identified three categories of needs:

1. **Existence needs:** The needs for physical well-being;
2. **Relatedness needs:** The needs for satisfactory relationships with others;
3. **Growth needs:** The needs that focus on the development of human potential and desire for personal growth and increased competence.

- ✓ Alderfer's and Maslow's theories are similar – all use a hierarchical approach and presume that individuals move up the hierarchy one step at a time.
- ✓ Alderfer reduced the number of needs categories to three;
  - ✓ Proposes that movement up the hierarchy is more complex, reflecting a frustration-regression principle;
  - ✓ Less rigid compared to Maslows;
  - ✓ Suggests that individuals may move down as well as up the hierarchy, depending on their ability to satisfy needs.

TWO FACTORY THEORY

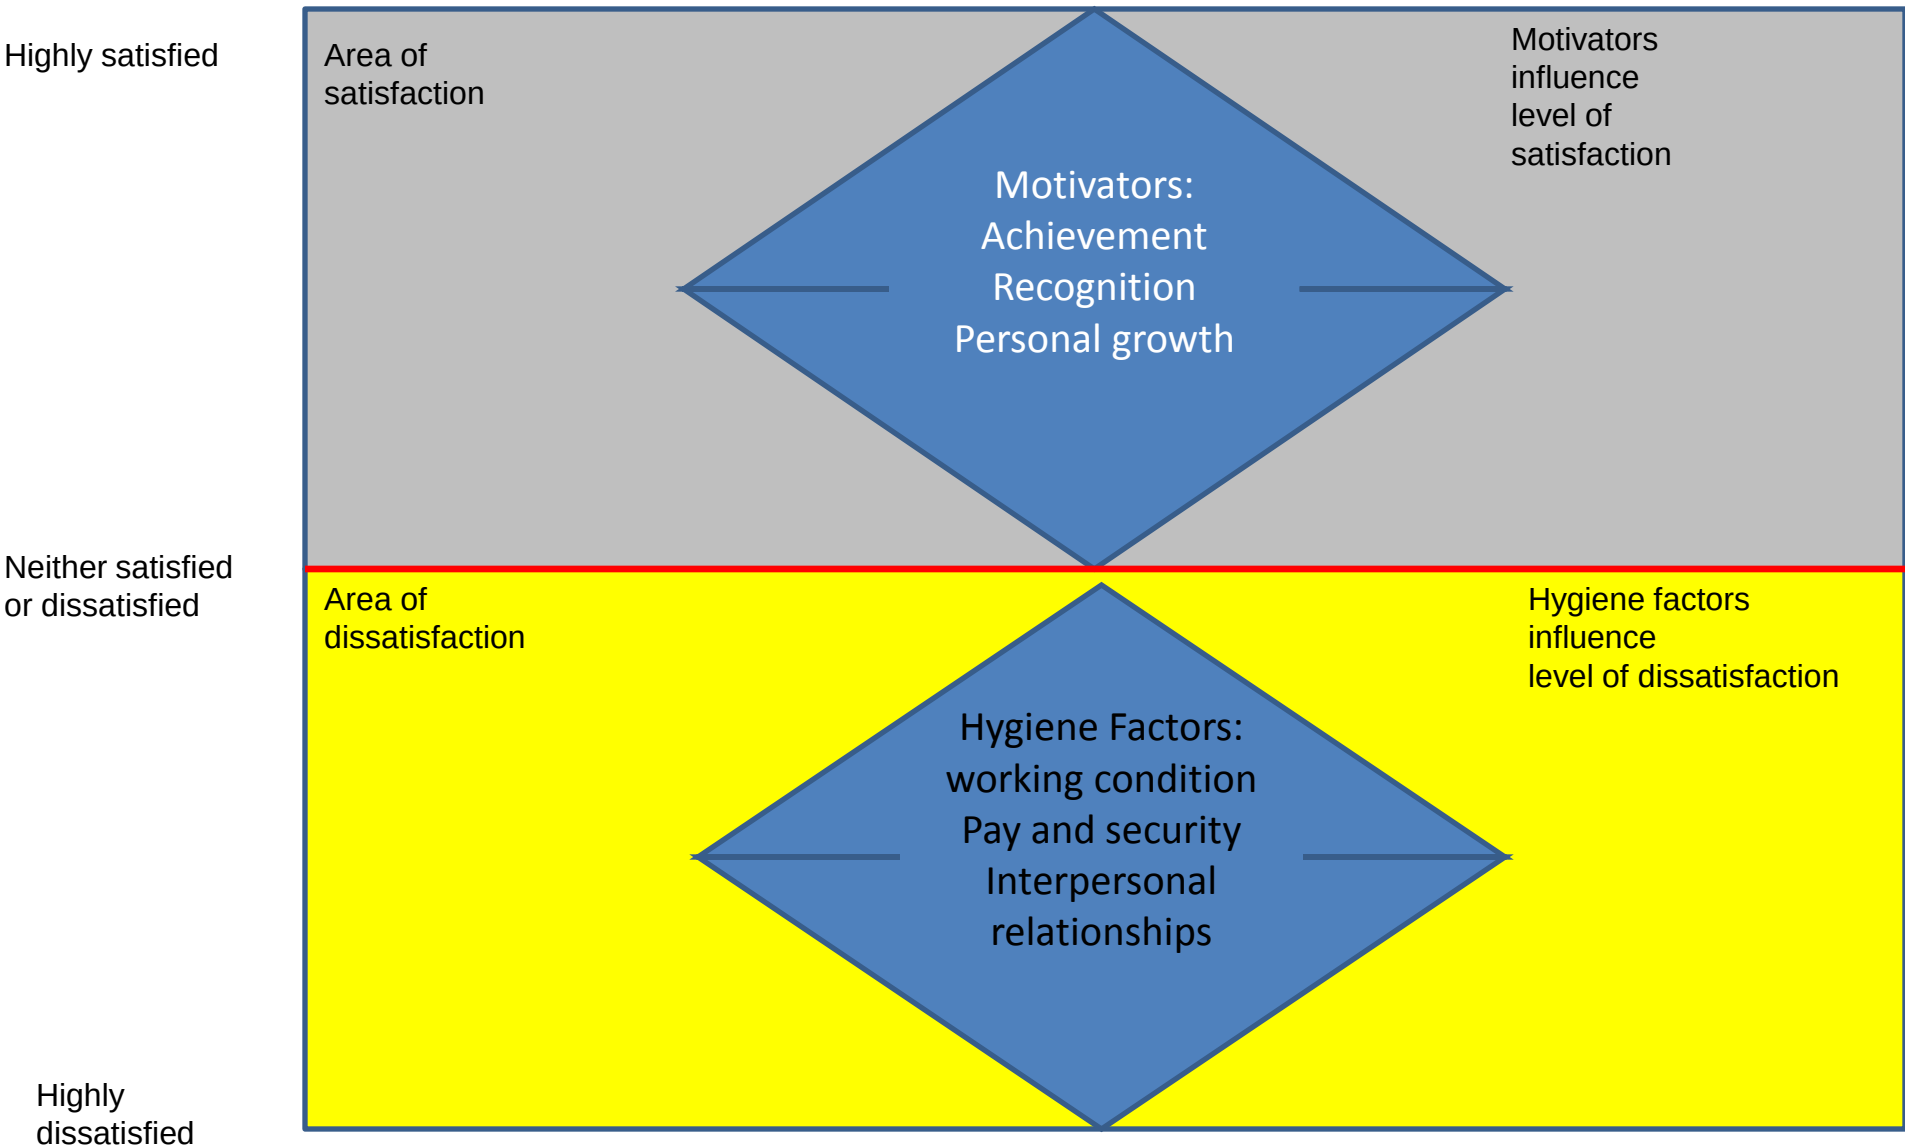

Frederick Herzberg developed the **two- factor theory**.

✓ The findings suggested that the work characteristics associated with dissatisfaction were quite different from that associated with satisfaction.

This prompted the notion that two factors influence work motivation:

1. Hygiene factors
2. Motivators

Herzberg's Two-Tactor Theory

LEADING TEAMS

Some organisations have had great success with teams including increased productivity and higher employee satisfaction.

A team is a unit of **two or more people** who **interact** and coordinate their work to accomplish a **specific goal**.

Effective Team Characteristics:

Trust: Members trust one another on a deep emotional level; feel comfortable being vulnerable with one another.

Healthy Conflict: Members feel comfortable disagreeing and challenging one another in the interest of finding the best solution.

Commitment: Because all ideas are put on the table, people can eventually achieve genuine buy-in around important goals and decisions.

Accountability: Members hold one another accountable rather than relying on managers as the source of accountability.

Result Oriented: Individual members set aside personal agendas; focus on what's best for the team. Collective results define success.

MANAGING GROUP PROCESSES

Belbin's Team Roles

✓ Developed by Meredith Belbin in 1981, following nine years of study

✓ Belbin's team roles has become a widely used tool to support team building.

✓ The team roles were designed to define and predict potential success of management teams, recognising that the strongest teams have a diversity of characters and personality types.

✓ The tool helps to describe an individual's 'preferred' team roles and is designed to indicate how you would ideally operate in a team environment.

✓The Belbin Team Roles Model can be used in several ways:

- ✓to think about team balance before a project starts,
- ✓to highlight and so manage interpersonal differences within an existing
- ✓to develop yourself as a team player.

BELBIN'S TEAM ROLES

	Team role	Strengths	Allowable weaknesses
Action oriented roles	 **Shaper**	• Challenging, dynamic, thrives on pressure • The drive and courage to overcome obstacles	• Prone to provocation • Offends people's feelings
	 **Implementer** (company worker)	• Disciplined, reliable, conservative and efficient • Turns ideas into practical actions	• Somewhat inflexible • Slow to respond to new possibilities
	 **Completer finisher**	• Painstaking, conscientious, anxious • Searches out errors and omissions • Delivers on time	• Inclined to worry unduly • Reluctant to delegate
People oriented roles	 **Co-ordinator** (Chairman)	• Mature, confident, a good chairperson • Clarifies goals, promotes decision-making, delegates well	• Can often be seen as manipulative • Offloads personal work
	 **Teamworker**	• Co-operative, mild, perceptive and diplomatic • Listens, builds, averts friction	• Indecisive in crunch situations
	 **Resource investigator**	• Extrovert, enthusiastic, communicative • Explores opportunities • Develops contacts	• Over - optimistic • Loses interest once initial enthusiasm has passed
Cerebral roles	 **Plant**	• Creative, imaginative, unorthodox • Solves difficult problems	• Ignores incidentals • Too pre-occupied to communicate effectively
	 **Monitor evaluator**	• Sober, strategic and discerning • Sees all options • Judges accurately	• Lacks drive and ability to inspire others
	 **Specialist**	• Single-minded, self-starting, dedicated • Provides knowledge and skills in rare supply	• Contributes only on a narrow front • Dwells on technicalities

TYPES OF TEAMS

The easiest way to classify teams is:

✓ in terms of those created as part of the organisation's formal structure and

✓those created to increase employee participation.

Formal teams: these are created by the organisation as part of the formal organisation structure.

- ✓**Vertical teams (functional teams):** composed of a manager and his or her subordinates in the formal chain of command
- ✓**Horizontal teams**: composed of employees from about the same hierarchical level but from different areas of expertise.
- ✓**Special-purpose teams (project teams):** created outside the formal organisational structure to undertake a project of special importance or creativity.

✓**Self-directed teams**: those created to increase employee participation.

- ✓**Virtual teams:** made up of geographically or organisationally dispersed members who are linked primarily through advanced information and telecommunications technologies.
- ✓**Global teams:** are cross-border work teams made up of members of different nationalities whose activities span multiple countries.

EXERCISE

What are the characteristics of teams?

Managing Team Conflict

Managing team conflict is very important to team management. Whenever people work together in teams, some conflict is inevitable. Conflict can arise among members within a team or between one team and another.

Conflict refers to antagonistic interaction in which one party attempts to block the intentions or goals of another.

Bringing conflict out into the open and effectively resolving them is one of the manager's responsibility and most challenging goals.

What are the sources of conflicts in teams?

Sources of Conflict

Resources (money, information and suppliers): Whenever individuals or teams must compete for scarce or declining resources, conflict is almost inevitable.

Poor communication: This results in misperceptions and misunderstandings of other people and teams. In some cases, information is intentionally withheld, which can jeopardise trust among teams and cause long-lasting conflict.

Personality clashes: This occurs when people simply do not get along or do not see eye-to-eye on any issue. They are caused by basic differences in personality values, and attitudes.

Goal differences: Goal differences are natural in organisations. Individual salespeople's targets may put them in conflict with one another or with the sales manager. The sales department's goal might also conflict with manufacturing goals.

Conflict Handling Styles
