Questions

1. Secondary tillage does the following except

a. Building or levelling beds for the next crop.
b. Preparing soil surface for the efficient harvest operation.
c. Eliminating tracks or nuts from previous harvest.
d. Providing loose, mulch-covered surface.
e. None of the above.

2. Which of these implements is not commonly used for primary tillage?

a. Rotary tillage
b. Bedders
c. Rotary hoes
d. Mould board ploughs
e. None of the above.

3. Which of these implements is not commonly used for secondary tillage?

a. Disc tillers
b. Row- crop cultivators
c. Rod weeders
d. Listers
e. None of the above.

4. The following are all tillage practices except;

a. Conventional tillage
b. Conservational tillage
c. Reduced tillage
d. Mulch tillage
e. None of the above.

5. Rotary tillers are sometimes called…….. Implements because they can prepare a seed bed in a simple operation

a. Conventional tillage
b. Mulch tillage
c. Zero- tillage
d. Minimum tillage
e. None of the above

6. The advantages of a mould board plough over disc plough include;

i. Mixing action on loose soil
ii. Rolls over obstacles so that hardly any breakage occurs
iii. Lower risk of chocking

a. I and ii only
b. Ii. and iii only
c. I and iii only
d. I, ii and iii
e. None of the above

7. The disadvantages of disc plough over mould – board plough include all the following except.

a. Difficult penetration in hard soils
b. Heavy weight – thus high prices
c. Lesser lifting capacity required from tractors hydraulic system
d. Less efficient weed control
e. None of the above.

8. Any mechanism for crop establishment must fulfil the following criteria except;

a. The crop must be established at the correct depth
b. There must be no damage to the plant material
c. The crop must be established at the correct density
d. Care should be taken to avoid destroying soil structure
e. None of the above.

9. which of these is a critical factor affecting the yield of many crops?

a. Plant width
b. Number of weeds
c. Number of plants/ land
d. Size of farm
e. None of the above

10. Generally plant population and spacing are influenced by the following factors except;

a. Crop type
b. Soil type
c. Plant size
d. Weed count
e. None of the above

11. Which of these are methods of establishing crops?

i. Broadcasting
ii. Row cropping
iii. Transplanting

a. i and ii
b. ii and iii only
c. i and iii
d. i, ii and iii
e. None of the above

12. The main disadvantages of broad casting include the following except;

a. Inter-row cultivation by mechanical means is easy if not impossible
b. Plant population density cannot be controlled
c. Mechanical harvesting cannot be done efficiently
d. Variable rates of germination because of variable depths of sowing
e. None of the above.

13. The random dropping of seed and covering at the same time in the furrows at constant rate to give definite rows is known as

a. Precision seeding
b. Hill dropping
c. Drill seeding
d. Hand broadcasting
e. None of the above.

14. The accurate placing of single seeds at specific equal intervals in rows is known as

a. Precision seeding
b. Hill dropping
c. Drill seeding
d. Hand broadcasting
e. None of the above.

15. The dropping of groups of seeds at equal intervals in rows to guard against germination failures is known as

a. Precision seeding
b. Hill dropping
c. Drill seeding
d. Hand broadcasting
e. None of the above

16. The following are equipment for broadcasting except;

a. The fiddle
b. The cyclone
c. Air planes
d. End gate seeders
e. None of the above

17. Which of these is not a row crop planting system?

a. Ridge planting
b. Furrow planting
c. Bed planting
d. Lister planting
e. None of the above

18……..is practiced more in the semi-arid areas or dry areas for row crops such as corn and sorghum

a. Ridge planting
b. Furrow planting
c. Red planting
d. Slope planting
e. None of the above

19. Which of these is/are practiced in high rainfall areas where there is the need to improve surface drainage

i. Ridge planting
ii. Furrow planting
iii. Bed planting

a. i. and ii only
b. ii. and iii only
c. i. and iii only
d. i. ii, iii
e. none of the above

20. Which of the following factors affect seed germination and seed emergence?

i. Seed viability
ii. Soil temperature
iii. Soil texture

a. i. and ii only
b. ii. and iii only

c. i. and iii only
d. i. ii and iii
e. None of the above

21. All the following include functions of a planter except;

a. To cover the seed
b. To count the seed
c. To deposit the seeds in the furrow
d. To open the seed furrow to prosper depth in the soil
e. None of the above.

22. Which of these is / are desirable characteristics of metering devices.

i. There should be available means of altering the seeding rate easily
ii. Ability to maintain uniformity both in the inverse and latitudinal direction
iii. Performance should not be affected by the level of seed in the hopper.

a. i. and ii only
b. ii. and iii only
c. i. and iii only
d. i. ii and iii
e. None of the above

23. Which of the following is not a material device for seed drills?

a. Fluted roll
b. Brush feed
c. Studded roller
d. Bricked drills
e. None of the above

24. The percentage cell fill is influenced by all of the following except

a. The range of seed hoppers
b. The shape of the seeds
c. The exposure time of the cells to the seeds
d. The linear speeds of the cells
e. None of the above

25. Which of these is not a seed metering device for precision seeder?

a. The transverse plate
b. The inclined plane

c. The horizontal plate
d. The vertical plate
e. None of the above

26. Which of these is not an advantage of combined (Grain) drill and planter?

a. The cost is lower than the ordinary planter and drill
b. Helps in the more rapid crop establishment
c. It saves fuel and time
d. Labour cost is reduced
e. None of the above.

27. The disadvantages of combined (Grain) drill and planter includes all the following except;

a. Damage of seeds and poor germination
b. Leaching prevention
c. Suffering from higher rates of deterioration
d. Heavier than the standard models
e. None of the above

28. Anything that interferes the with the growth, development and yield of plant is known as

a. Impedance
b. Parasite
c. Redundant
d. Pest
e. None of the above.

29. Which of the following is not a pesticide?

a. Insecticide
b. Fungicides
c. Herbicides
d. Rodenticide
e. None of the above

30. The size and type of agricultural field machine depends on all the following except

a. The soil
b. The climate
c. Timeliness
d. Cost and
e. None of the above

31. Which of these is not a method of weed controlling?

a. Physical method
b. Chemical method
c. Biological method
d. Agronomic method
e. None of the above

32. Which of these is/are mode(s) of action of chemical weed control?

i. Contact type
ii. Translocated type
iii. Spraying type

a) i. and ii only
b) ii. and iii only
c) i. and iii only
d) i. ii, iii
e) None of the above

33. The ---------- may be metal or plastic tube projecting symmetrically on either the sprayer in the perpendicular direction of travel.

a. Boom
b. Pump
c. Pressure gauge
d. Tank
e. None of the above

34. ---------- chemicals are those which destroy all foliage on which they are sprayed

a. Non selective
b. Contact
c. Selective
d. Translocative
e. None of the above

35. Which of these is not a common feature in all sprayers?

a. Inlets called valves
b. Tank to hold spray liquid
c. Liquid is moved from the tank by gravity
d. Outlets called nozzles
e. None of the above

36. The following are all types of sprayers except

a. Pressurized tank sprayer
b. Liquid sprayer
c. Centrifugal atomization
d. Driplets sprayer
e. None of the above

37. Which of these is not an essential part of a hydraulic sprayer?

a. The pump
b. An agitator
c. Relieve valve
d. Piston
e. None of the above

38. Which of the following are desirable characteristics of the pump?

i. Must be able to run for some time without chemicals
ii. Must not be self-priming
iii. Should be able to develop the necessary pressure

a. i. and ii only
b. ii. and iii only
c. i. and iii only
d. i. ii, iii
e. None of the above

39. Which of these is supposed to atomize the fluid and distribute it evenly over the surface?

a. Boom
b. Nozzle
c. Control valve
d. Pump
e. None of the above

40. The ---------- is suitable for weed spraying and for low volume application where good penetration of growing crops is required

a. Cone type
b. Anvil type
c. Oscillating tube *(Amanfoɔ, it looks like there nothing called 'this' in nozzles)*
d. Fan type
e. None of the tube

41. The _____ nozzle is preferable for applying insecticides and for close range spraying where the chemical must be accurately applied

a. Cone type
b. Anvil type
c. Oscillating tube
d. Fan type
e. None of the above

42. The _____ nozzle is used in non- selective application where the application is not critical

a. Cone type
b. Anvil type
c. Oscillating tube
d. Fan type
e. None of the above

43. The main fluid properties which affect droplet sizes are;

i. Surface tension
ii. Viscosity
iii. Decrease in pressure

a. i. and ii only
b. ii. and iii only
c. i. and iii only
d. i. ii and iii
e. None of the above

44. Which of these statements is correct?

a. Increased surface tension decrease the size of droplets produced by any given nozzle
b. Decreased surface tension increase the size of droplets produced by any given nozzle
c. Increased surface tension increase the size of droplets produced by any given nozzle
d. Decreased surface tension decrease the size of droplets produced by any given nozzle
e. None of the above

45. Which of these statements is correct?

a. For a given nozzle, decreasing the pressure will decrease the droplet size
b. For a given nozzle, increasing the viscosity will decrease the droplet size
c. For a given nozzle, increasing the pressure will decrease the droplet size
d. For a given nozzle, decreasing the viscosity will increase the droplet size
e. None of the above

46. The factors affecting the eventual spray concentration per hectare include

i. The speed of travel
ii. The height of the boom
iii. Nozzle spacing on the boom

a. i. and ii only
b. ii. and iii only
c. i. and iii only
d. i. ii and iii
e. None of the above

47. When set for hill- side operation the boom will stay ---------- to the tractors or sprayer axle while still absorbing movement and stress

a. Perpendicular
b. Horizontal
c. Parallel
d. Transverse
e. None of the above

48. When set for flat land operation, the boom will stay substantially ---------- while absorbing most of the movement stress transmitted from the tractor or sprayer.

a. Perpendicular
b. Horizontal
c. Parallel
d. Transverse
e. None of the above

49. The factors affecting selecting of grain harvesting method include all the following except

a. Lodging
b. Shattering
c. Timeliness
d. Use of straws
e. None of the above

50. The tendency of crops falling before harvesting time is known as……..

a. Shattering
b. Picking
c. Lodging
d. Pre- harvesting
e. None of the above
